

### 8 Gun Rotating Head Blasting System

**Application:** To blast workpieces with complex structures like impellers or car rims using aluminum oxide.

This is a PLC system where multiple workpieces can be loaded onto the turntable and processed with the touch of a button. Abrasives are consistently fed to the 8 blast guns via gravity flow, providing uniform blast coverage at different angles.

- PLC control system with turntable, gun rotation speed, time fully programmable
- Continuous rotary blasting through 8 blast guns
- Pneumatic door and large side doors for easy access to blast guns and workpieces.
