

Stainless Steel Wetblast Cabinet

Hydroblast 1515 with additional features.

This system does automated wetblast on large heavy moulds with the degreasing effect of water. Wetblast reduces the harsh effects of abrasives on the metal surface and gives it a softer matt finish. Using PLC controls, operator can choose between auto or manual operations.

Added Optional features

- Robust 100% stainless steel construction
- 3 abrasive submersible pumps with high grade polyurethane impellers to provide a uniform and distributed abrasive flow
- 1 touch button fully automatic blast mode
- Customized multi-gun configuration with horizontal motions for complete coverage
- Powered stainless steel turntable workcar (3tons loading)
- Media concentration indicator to monitor abrasive-water proportions
